

GROOVIX – PROJECT DEVELOPMENT REPORT

Executive Summary

Groovix is a fully client-side music player application built using HTML5, CSS3, and JavaScript. It runs entirely in the browser and provides a seamless experience across devices.

Project Objectives

Develop a music player, integrate AI assistance, enable playlist management, ensure responsiveness, and build a strong brand identity.

System Architecture

The system consists of index.html, style.css, player.js, ai.js, and app.js. Data is stored using localStorage.

Key Features

Music playback, library management, favorites, playlists, AI assistant, and splash screen.

Responsive Design

Mobile-first design supporting desktop, tablet, and mobile layouts.

Technical Highlights

No frameworks, File System Access API, Blob URLs, localStorage, CSS animations.

Limitations

Limited browser support for some APIs and session-based audio loading.

Conclusion

Groovix is a scalable, modern web music player with strong user experience and flexibility.
